

Note: Make sure your iPhone is under Developer Mode. You can go to Settings -> Privacy & Security to check if the Developer Mode is 'On' or 'Off'

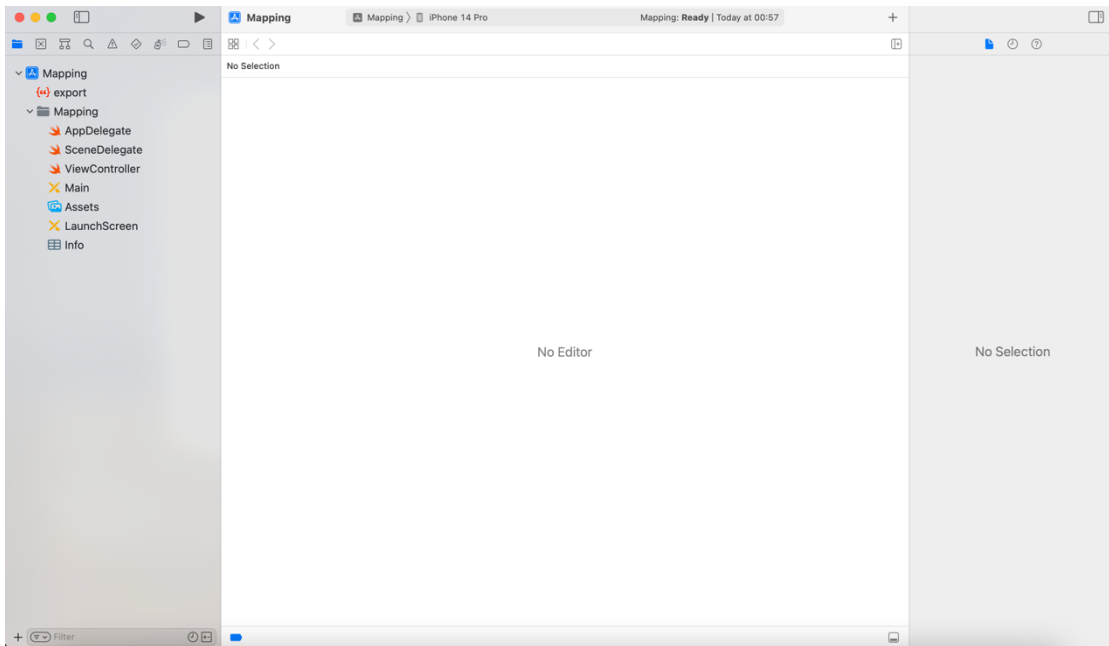

1. Open the file folder and then click the file named Mapping.Xcodeproj

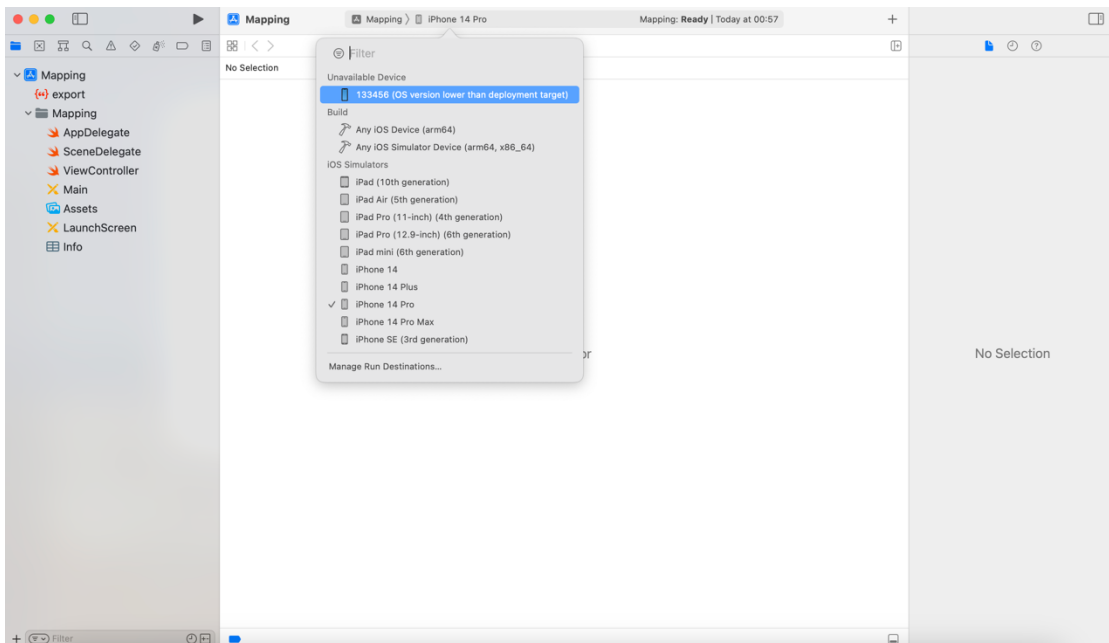

2. Click Trust and Open

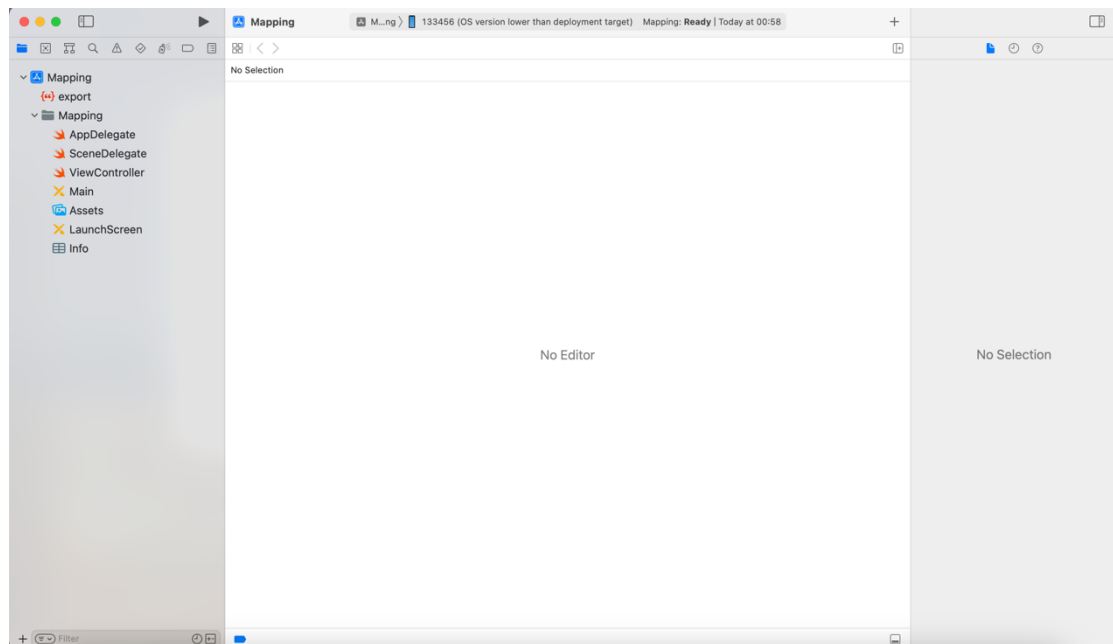

This is the xcode page after you open it

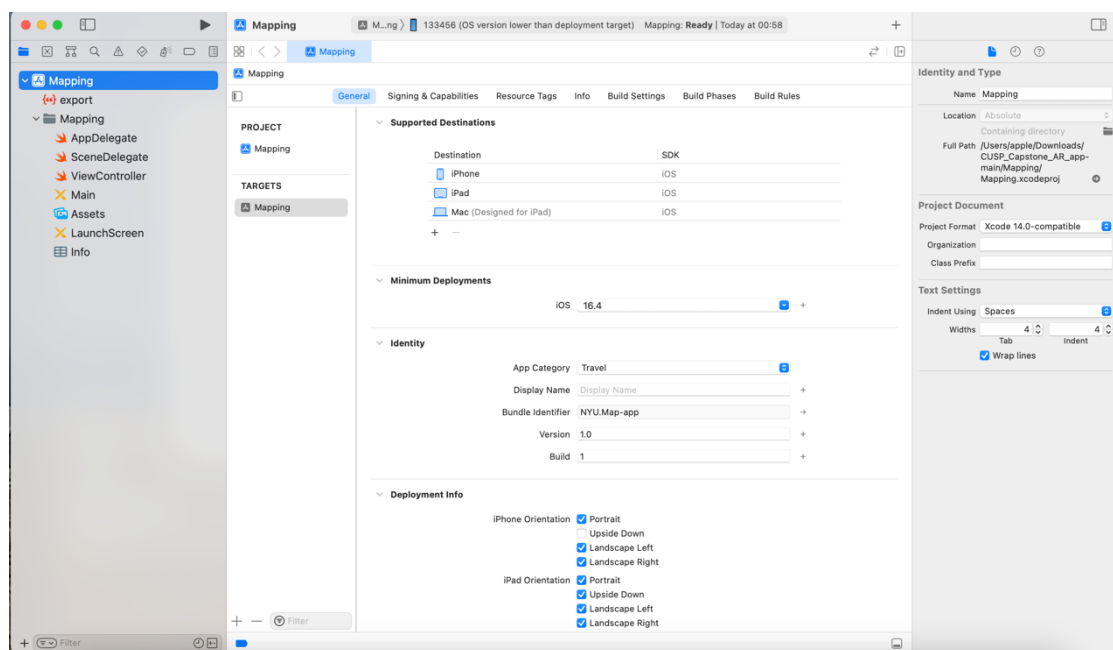

3. Connect the computer with your iphone. Then select your iphone from the top.

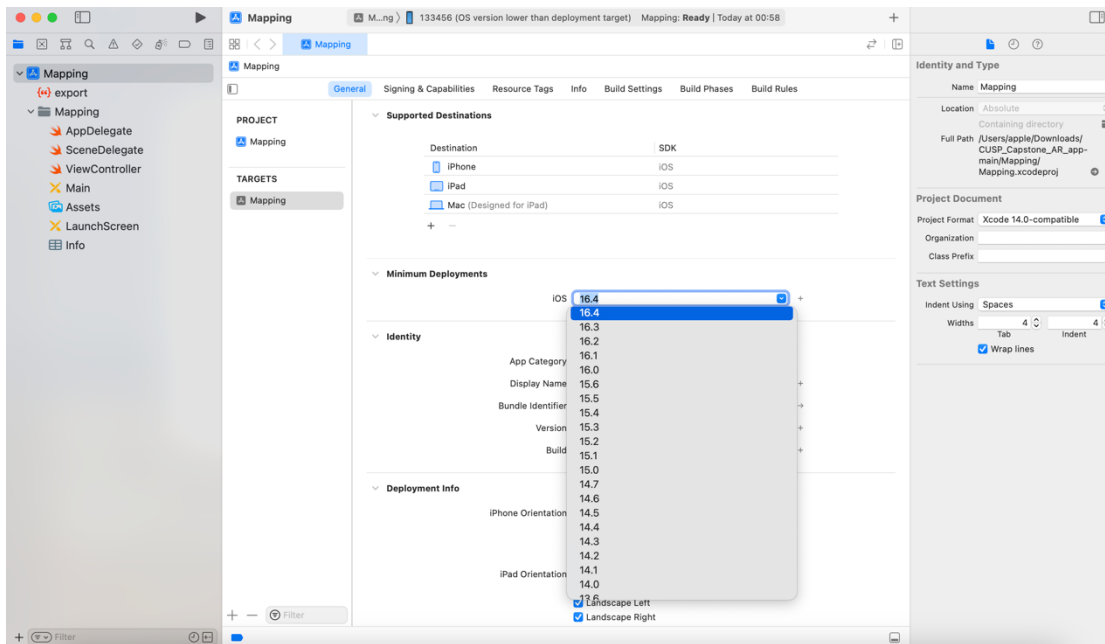

4. Check your ios version on your iphone to see if it is fit. If your ios version doesn't match the requirement, you need to do the step 5.

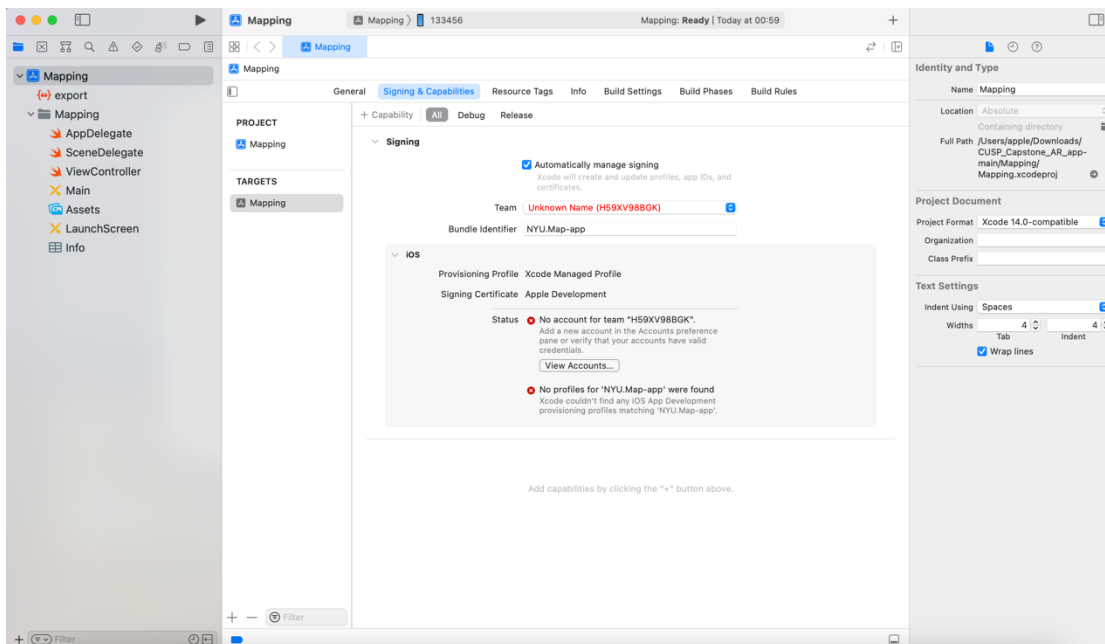

5. Double click the Mapping and then you can see the General. Under the Minimum Deployments, you can select the ios version to match your iphone

- Go to the Signing&Capabilities Page, change the team to your own account and change the Bundle Identifier. The following image show the Bundle Identifier as NYU.Map-map. You can replace the NYU with any strings you want. For example Apple.Map-map.

- Run the code to download app on your iphone, make sure your iphone is open.
